

# ECE 495/595 – Web Architectures/Cloud Computing

## Module 5, Lecture 2: Web Application Security – Authentication

Christopher Lamb Ph.D, CISSP, TCEA

University of New Mexico

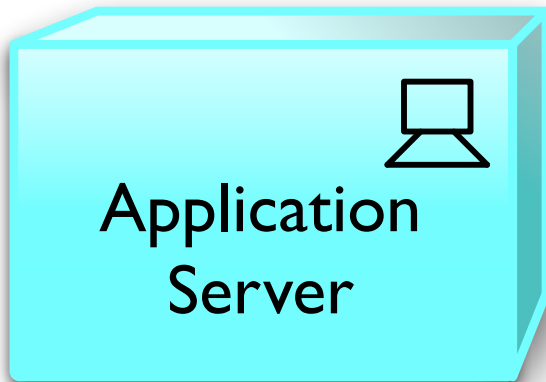

# What is Capistrano?

## Starting out...

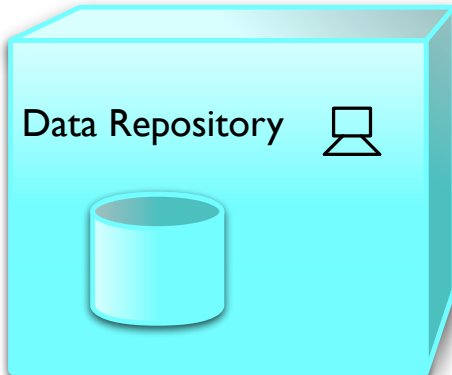

# Application

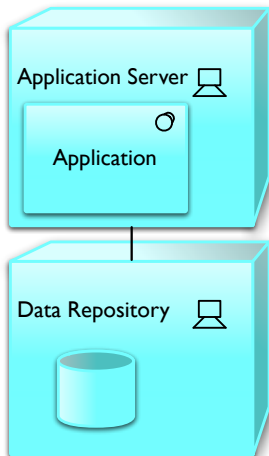

...where to put it?

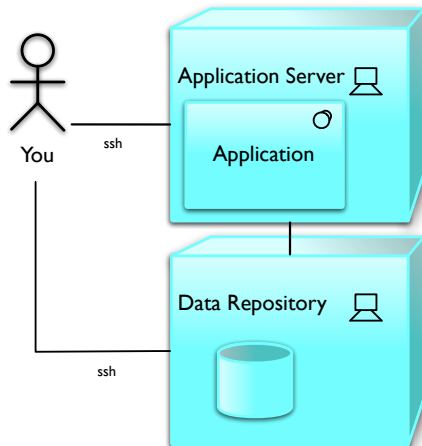

## ...and how to store stuff?

...now linking it together...

...and this is how you manage it.

# Is this sufficient?

Well, probably okay for:

- School
- Departments
- Small organizations

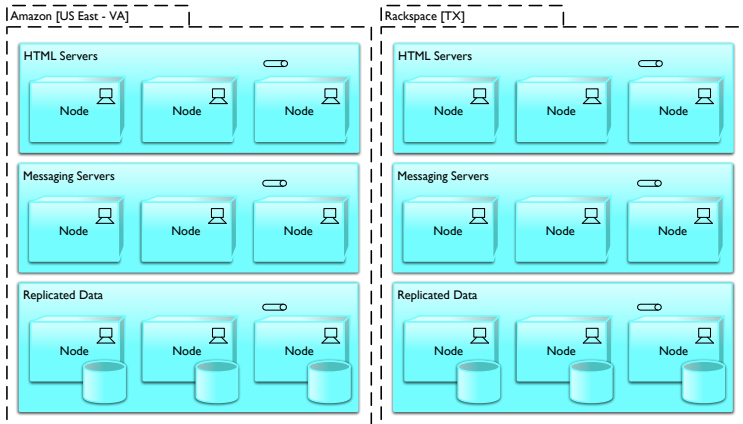

But honestly, not very real world. Systems with any kind of availability requirements or volume usually have:

- More systems
- Specialized systems
- More providers

**Really? Well, why not?**

# Typical small deployment...

...and you're responsible for it.
